

NISHANTH GOPINATH

AI Solutions Engineer

Dublin, Ireland • Stamp 1G, full Irish work authorisation, no sponsorship required • Available immediately
nishanthgopi2002@gmail.com • linkedin.com/in/nishanth-gopinath • github.com/GNishanth7

SUMMARY

AI/ML engineer focused on moving LLM tooling out of prototype and into production. Shipped a LangGraph multi-agent platform running live at a Dublin startup, a four-agent RAG system processing 1,000+ supplier documents daily for a paying client, and a ChatGPT API integration into analytics reporting in 2023. Works inside a normal engineering process: Jira tickets, code review, dev to production.

SKILLS

AI and LLM Tooling: LangGraph, LangChain, RAG pipelines, multi-agent orchestration, supervisor graphs, prompt engineering, tool-calling, human-in-the-loop (HITL), context management, Gemini AI, OpenAI GPT

Languages: Python (asyncio, type hinting, Pydantic), SQL, JavaScript/TypeScript, HTML/CSS

Engineering and Cloud: FastAPI, Docker, Docker Compose, GCP (Cloud Run, Pub/Sub), REST API design, GraphQL, Node.js, Next.js, React, Git, GitHub, Linux, Jira

Data and Retrieval: MongoDB (Atlas, HNSW), PostgreSQL, Redis, FAISS, semantic retrieval, reranking, pandas

EXPERIENCE

AI/ML Software Developer Intern

KittyKat

Aug 2025 to Oct 2025
Dublin, Ireland (Remote)

- Architected a production multi-agent platform using LangGraph, with a supervisor routing tasks across 3 specialised agents (branding, campaign, moodboard), running live campaign workflows with real-time LLM token streaming and zero session data loss across multi-turn generation.
- Engineered a 100x reduction in p95 vector search latency (30 seconds to under 300ms) for MongoDB HNSW semantic retrieval in production, root-causing a full-collection scan and restructuring the indexing strategy under live traffic.
- Resolved a production chatbot defect where onboarding details were not persisted across turns, by reworking the system prompt and context handling.
- Ran daily standups with the tech team, reported to the COO, wrote Jira tickets, and shipped through a dev to production review process.

Stack: Python, LangGraph, LangChain, Gemini AI, MongoDB Atlas, HNSW, FastAPI, Next.js, Docker, GCP, Jira

Software Engineer Intern

Stremly

May 2025 to Jun 2025
Dublin, Ireland (Remote)

- Built and shipped production React and Next.js UI components from design handoff to live deployment, delivering user-facing features across a 1-month remote engagement.
- Redesigned RESTful and GraphQL API contracts in Node.js, eliminating over-fetching and decoupling client data dependencies across the core product.

Software Developer

Plumb5

Jan 2023 to Apr 2023
Bangalore, India

- Integrated the ChatGPT API into analytics reporting workflows, enabling natural-language querying of customer behaviour data and cutting report turnaround from hours to under 5 minutes.
- Audited the CDP architecture for scalability bottlenecks and third-party integration gaps, delivering a findings report on data ingestion limits and API extensibility to engineering and product stakeholders.

PROJECTS

SPEAR: Multi-Agent Supplier Quotation RAG System

- Developed a production-deployed 4-agent RAG system for an external procurement client, processing 1,000+ supplier documents daily using LangGraph and Gemini AI.
- Reduced supplier quotation analysis from 5 hours to 15 minutes (95% reduction), with a supervisor agent routing across four sub-agents: document parsing, semantic retrieval, multi-criteria evaluation, and report generation.
- Implemented Pydantic-validated inter-agent message schemas, making agent outputs type-safe and directly parseable downstream.

Stack: Python, FastAPI, LangGraph, FAISS, Gemini AI, Pydantic, Docker

AI Health Insurance Chatbot

12-hour hackathon

- Delivered a production RAG chatbot for health insurance Q&A inside a 12-hour hackathon, fully functional at the submission deadline.
- Indexed policy documents with FAISS and sentence-transformers, added PDF claim summary generation and email delivery, and containerised with Docker.

Stack: Python, FastAPI, FAISS, sentence-transformers, Docker, Railway

EDUCATION

MSc Computer Science (Data Science)

Trinity College Dublin

Sep 2024 to Sep 2025
Dublin, Ireland

- Dissertation (73%): Personalised Secure Slimmable Quantum Federated Learning, privacy-preserving healthcare ML combining federated learning, slimmable neural networks, and quantum key distribution.

BTech Artificial Intelligence and Machine Learning

Rajalakshmi Engineering College

2020 to 2024
Chennai, India

- Best Paper Presenter Award, International Conference on Emerging Trends in Engineering and Management (2024). Published CNN-based research on fetal health prediction.
